

eComply Field Inspection

Digitize onsite observations,
results, and concerns in real time

The eComply Field Inspection module provides agencies with a fail-proof way to validate workforce use, their hours, and wages. With it, compliance officers can compare real-time data with reported data and provide contractors and subcontractors with the ability to course correct if needed. Through the online app, field inspectors have a smart tool to manage interviews and onsite visits digitally, which is critical to verifying compliance with accurate observances.

Simplify onsite interviews and observations

Key Features:

- **Online App for Field Inspections:** Enables inspectors to maintain reports and share information on various devices, with or without internet. Data is synchronized with the main system to check for CPR inconsistencies.
- **Onsite Worker Interviews:** Compliance Officers can visit sites to interview workers and compare reported CPR wages with actual wages. Discrepancies can be reported for correction.
- **Photo Gallery:** Capture and upload worker or site photos to the system for review against contractor profiles.
- **Online/Offline Capabilities:** The module operates offline when internet access is unavailable onsite. Notes are recorded electronically and synced later to compare against CPR data.

eComply Field Inspection

By eliminating handwritten notes, compliance officers can capture real-world activities with minimal effort. The Field Inspection module offers game-changing efficiencies, enabling quicker, more accurate reporting that is synced to the larger compliance solution, thereby eliminating duplicate data entry.

Why eComply?

- ✓ **Technology at your fingertips:** Mobile functionality captures real-time data and syncs with the larger system.
- ✓ **Accelerates communication:** Quickly capture real-time conditions and communicate them to project managers.
- ✓ **Automates calculations:** Compares actual hours and pay to reported hours and pay, and flags discrepancies between the two.
- ✓ **Course correct more quickly:** Data gathered in the field can be quickly and easily compared to information submitted in certified payroll reports, allowing Compliance Officers to immediately spot areas of inconsistencies and correct them as needed.
- ✓ **Capture complete data:** Employee interviews, daily logs, and images are gathered digitally to help form a complete view of the project site and status.
- ✓ **Employee verification to prevent fraud:** Compliance Officers can easily pull employee photographs on the eComply database to verify that the individual being interviewed in the field is the person they claim to be.

About B2Gnow:

B2Gnow delivers leading software solutions that promote accountability, transparency, and compliance in public and private contracting. For over 25 years, agencies across North America, including federal, state, local, education, and Fortune 500 organizations, have relied on B2Gnow to manage complex compliance programs. Its integrated platform includes B2Gnow for vendor management, certification, goal tracking, and DBE/MBE/SBE/WBE compliance reporting, eComply for prevailing wage and workforce reporting, and BlackCat for grant management and project oversight. Purpose-built for infrastructure projects, B2Gnow's technology enhances transparency, reduces risk, and strengthens communities. Learn more at www.b2gnow.com.
